EN4M™ business applications

Smart Software for Smart Solutions

EN4M™ ba

The
fastest way to
your perfect
business
software

EN4M™ ba

Our tailor-made solutions start at a high level with fully developed standard modules embedded in our business application platform EN4M™. This dramatically reduces time and costs.

Individually developed software tends to be a relatively expensive and risky undertaking. Standard software is often not an option as it is simply not flexible enough to fulfill the company-specific requirements. Our EN4M™ business application platform offers a solution which combines the best of both worlds. We create your customized business software by intelligently adjusting existing EN4M™ modules.

EN4M™ ba

Maintaining a competitive edge with our proven solution of modules from the EN4M™ business application platform
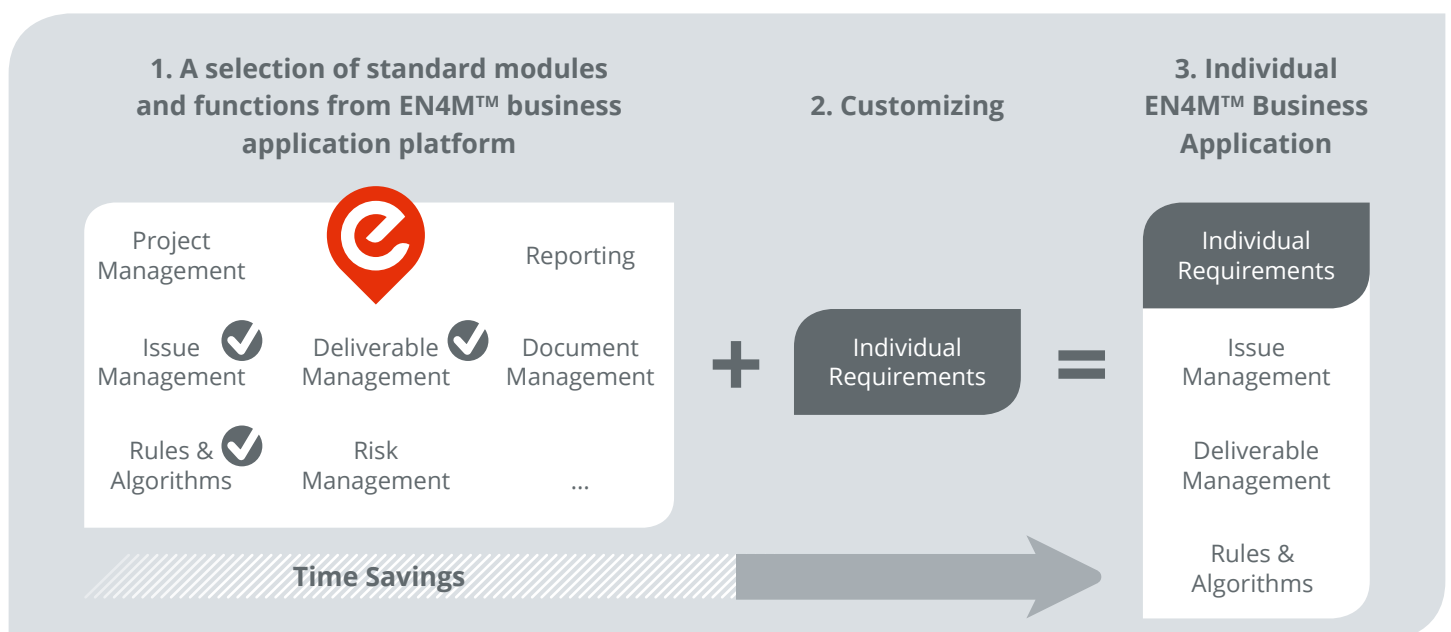

1. A good foundation with standard modules

Most companies have some internal processes which are unique to them. Nevertheless many processes are similar or even identical from company to company. We do not have to reinvent the wheel. In such cases ready-made standard modules of the EN4M™ business application platform can be used. These modules which have been tried and tested over many years and are still being continually improved are combined on an individual basis according to a modular construction system. This is how we achieve the basis for a high-level solution within a minimum amount of time.

2. Customizing

Once the advantages of standardization have been fully exploited, we start adapting the software according to your requirements. With our expertise in this process we achieve optimum results quickly by integrating everybody involved in the implementation process.

3. We achieve standardized yet flexible solutions in minimal time

EN4M™ individual solutions are quickly realized and impress with their practicality. The flexibility of the system is retained even after completion. Your personal EN4M™ business application can be adapted to new conditions at any time.

EN4M™ ba

A tried and tested system

With the EN4M™ business application platform you are choosing a sophisticated system. Numerous corporations and hidden champions are aware of this already. For over 20 years they have been placing their trust in our expertise as an innovative system provider whenever it comes to tailor-made reference processes and software solutions for complex issues.

Optimum application in minimal time

Analytical and standardized methods dramatically reduce implementation times of new processes and systems in your company. We actively integrate your employees at an early stage. This ensures maximum user acceptance.

A sustainable and scalable solution

Whatever your business development may be, the EN4M™ business application can easily be adapted to future requirements both in terms of complexity as well as performance, particularly with regard to structures, processes, methods and also functionalities.

One central system for a variety of jobs

Business software that offers too little or is not flexible is counterproductive. Gaps are often plugged by drawing on other systems. A tangle of software is the result. This is not the case, however, with the EN4M™ business application platform. It offers multiple functions from a single source and enables fully developed and highly suitable solutions in significantly less time. EN4M™ business applications can easily be integrated into existing system landscapes.

EN4M™ ba

Advantages & Benefits

- Cost and risk reduction through a high level of standardization

- High flexibility through intelligent customizing and scalability

- Lower implementation effort and quick availability

- Sophisticated solution through extensive know-how and proven reference processes

- High level of user friendliness through convenient and easy configuration of the user interface

- Easy integration into existing system landscapes

- Use of modern technology standards and development methods

- No installation costs, because browser-based
